DO YOU HAVE APHASIA?

We invite you to participate in our research.

We are a group of researchers who conduct studies on aphasia.

What do our studies involve?

• An assessment of language skills.
• Some studies may include treatment.
• Some studies may involve a brain scan.
• The number of sessions and duration will vary.
• Studies are primarily conducted at Macquarie University in North Ryde, Sydney.

Your participation will increase our understanding of aphasia and help improve methods for assessment and treatment.

We are happy to discuss the different participation opportunities available and answer any questions.
