Harmonizing Together
Speech and Music Therapy and Support for Patients and Partners With Primary Progressive Aphasia

Katie Brandt, MM
Community Resource Specialist

Joyce Shapiro Gordon, MS, CCC-SLP
Speech-Language Pathologist

Megan Quimby, MS, CCC-SLP
Speech-Language Pathologist

Frontotemporal Disorders Unit
Massachusetts General Hospital
Boston, Massachusetts, USA
www.FTD-Boston.org
Pilot Program for Therapy & Support:

- **Group Participants**
  - 8 PPA Patients
  - 8 Care Partners

- **Staff Members**
  - 2 SLPs, 3 SLP Graduate Students
  - 2 Music Therapists
  - 1 Community Resource Specialist
  - 1 Neurologist

- **Timeline**
  - Round I: 8 weekly sessions, 90 minutes each
  - Round II: 4 monthly sessions, 120 minutes each
Method

- Pre Post Surveys
- Caregivers and Patients surveyed separately
- Caregiver Questionnaire
  - Zarit Caregiver Burden Interview
  - Communication Effectiveness Index – Modified (CETI-M)
- Patient Questionnaire
  - Chronic Disease Self-Efficacy Scales
  - Communication Effectiveness Index – Modified (CETI-M)
  - La Trobe Communication Questionnaire
Areas Measured

Patients -
- Confidence
  - Hobbies and recreation
  - Contribution to family life
- Feelings/Emotions
  - Isolation
  - Guilt
  - Embarrassment
- Communication
  - Initiating conversations
  - Using empty words

Caregivers -
- Feelings/Emotions
  - Motivation
  - Self care
  - Stress
- Communication of partner
  - Partner’s rate of speech
  - Partner’s conversation tracking
  - Partner’s word finding
Programmatic Goal
Improve Functional Communication

- 45 minutes per session of tailored speech-language therapy
  - Focus on acquisition of compensatory communication strategies
  - Opportunities for dyad utilization of acquired skills in group setting with therapeutic support
- Allowing time for patient and caregiver feedback about utilization of strategies at home

I felt this was very helpful and really appreciated the kindness and the depth of knowledge and commitment of the professionals. – Care Partner
I feel like I have developed successful strategies to compensate for my language impairment – Patient Response
Programmatic Goal:
Learning about PPA and Current Research

- 90 minute session dedicated to a presentation for patients and caregivers from FTD unit director with opportunity for question and answer
- Handouts provided from The Association for Frontotemporal Degeneration and local community resources for support

“Dr. Dickerson's meeting with the group was especially informative and hopeful, in that he is on the cutting edge of research in aphasia.”
– Care Partner
Programmatic Goal:
Utilizing Music Therapy to Enhance Communication & Connection

- 45 minutes per session dedicated to whole group music therapy by neurologically trained music therapist

- Music therapy sessions targeted the following:
  - Breathing exercises
  - Vocal strengthening
  - Utilization of Musical Instruments for Rhythm
  - Social & Emotional Connections

“I like the music therapy best. When I can't come up with the word, I sing.” – PPA Patient
Measuring the Impact – Social

Do you feel that your social life has suffered because you are caring for your relative?
- Caregiver Response

Do you feel like you can participate in social visits and activities?
– Patient Response

Scale: 1 Not confident - 10 Completely Confident

Scale: 0 Never 1 Rarely 2 Sometimes 3 Quite Frequently 4 Nearly Always
Programmatic Goal: Providing Emotional Support to Caregivers

- 45 minute session for caregivers with FTD unit community resource specialist
- Utilization of elements of Powerful Tools for Caregivers curriculum to promote caregiver resilience
- Handouts provided for local supports and community resources

“I feel that the group was very helpful to me and my wife. It gave me an opportunity to see other people in the same situation - both to talk to them and to find out how they are coping.” – Care Partner Response
Do you feel the time spent being a care partner causes you to have less time for yourself?

– Care Partner Response

Do you feel your health has suffered because of your involvement with your relative?

- Care Partner Response

Scale: 0 Never 1 Rarely 2 Sometimes 3 Quite Frequently 4 Nearly Always
Programmatic Goal
Decrease Patient Isolation

- Facilitation of patients meeting and connecting with one another
- Creating opportunities for social engagement through group based speech-language and music therapy

“This is a wonderful group- So glad about the things we have done together- Also the fact that we have met other PPA people & the other part of their family. Of course the group is helping me and I would like to continue with them”- Patient Response
Measuring the Impact - Isolation

Do you Feel Isolated from Family and Friends?
– Patient Response

I am still motivated to communicate with people I encounter in the general public
– Patient Response

Isolation Increase

1 2 3 4 5

Motivation Increase

1 2 3 4 5

PPA Group Change

Before
After

1 Never 2 Hardly Ever 3 Sometimes 4 A lot of the time 5 Always
Lessons Learned

OPPORTUNITIES FOR TREATMENT MODIFICATION TO ENHANCE PATIENT AND CAREGIVER OUTCOMES
Reasons for Negative Change

- PPA is a progressive disorder
  - Decline in language areas such as naming, fluency, auditory comprehension

- Areas not specifically targeted in PPA Group
  - Speech therapy focused on compensatory strategies

- More information may lead to more awareness of PPA and the diagnosis
  - This may explain increase in social isolation specifically guilt
Lessons Learned - Communication Strategies

1 Never 2 Sometimes 3 Often 4 Usually or Always
Lessons Learned - Social Isolation

Do you feel guilty about the time and effort your care partner spends helping you?
- Patient Response

Are you afraid for the future?
- Caregiver Response

Do you feel isolated from the general public because of your language impairment?
- Patient Response

1 Never 2 Hardly Ever 3 Sometimes 4 A lot of the time 5 Always

1 Never 2 Sometimes 3 Often 4 Usually or Always

1 Never 2 Hardly Ever 3 Sometimes 4 A lot of the time 5 Always
Thank You
Thank You
